Mobility & Transport

Skat supports efficient, safe and green transport and mobility strategies and offers vast experience in the construction and maintenance of bridges, roads, and tracks, and in the development of sustainable transport master plans. With in-depth expertise in these areas, Skat supports governmental institutions in planning and preparing operational transport frameworks leading to successful implementation of capacity building activities and transport strategies.

Capacity development and institutional strengthening is a key in the activities in order to anchor the technology at federal and regional levels as well as in educational institutions, the private sector and civil society. Environmental considerations are prioritised and, wherever possible, labour intensive construction is utilised as a way to boost local employment.

Our services include among others:

- Maintenance and construction of bridges, roads and tracks and development of transport master plans

- **Consultancy** for governmental institutions on transport plans with focus on cross-sectoral approaches, such as gender, health (including HIV/Aids), access to employment, and infrastructure.
- Capacity development and institutional strengthening in the area of planning and construction
- Anchor efficient technology at federal and regional levels as well as in educational institutions, the private sector and civil society
