

Skat Consulting has supported Costa Rica advancing circular economy

Costa Rica will promote composting as one of the alternatives to advance its national principles on sustainability, circular economy, and climate change mitigation. Skat Consulting managed to improve the composting processes in the largest existing plant. This project, funded by [Repic.ch](https://www.repic.ch/), has now been successfully concluded. Three practical guides produced in the project are available here: <https://skat.ch/publications-search/> (in Spanish)
