Environmental and Integrated Water Resources Management (IWRM)

Tackling poverty and improve infrastructure is only successful if it is well integrated with natural processes and cycles. At Skat, we act as knowledge brokers and networkers to bring together expertise and knowledge around water and waste management so that environmental and IWRM safeguards and goals are successful. Our particular technical strengths are around pollution control from solid and liquid waste management, water source protection and groundwater management and science.

Our services include among others:

- Support decentralisation efforts
- Preparation and implementation abatement plans (i.e. pollution control)
- Strengthening capacity building in Environmental Management Systems (EMS) including data collection and analysis
- Development of communication strategies
- Water Source Protection and Water Safety Planning planning
- Groundwater resources management and sustainable development
